EDUCATION

COMPUTER SCIENCE @ UNIVERSITY OF WATERLOO

Sep 2023 - Present | Waterloo, Ontario

Faculty Average: **96%**

WORK EXPERIENCE

SOFTWARE ENGINEER @ STR (INTERNSHIP) | REACT, FASTAPI, GRAPHQL, DOCKER, POSTGRESQL, GITLAB CI/CD

May 2026 – Aug 2026 | Woburn, MA

- Re-architected a single-site satellite backend into a multi-site communication system using FastAPI and WebSockets, applying OOP design patterns with SQLAlchemy to support low-latency streaming for U.S. DoD systems
- Re-engineered user interface workflows by combining six independent frontend services into a single React UI using Figma and an internal component library, qualifying the project for next-stage federal funding
- Created GitLab CI/CD pipelines to execute linting, unit testing, and multi-stage Docker builds

SOFTWARE ENGINEER @ IDEA NOTION (CO-OP) | REACT, TAILWIND, C#.NET, COSMOSDB, REDIS

Sep 2025 – Dec 2025 | Markham, ON

- Developed an automated customer communication system for car dealerships using Azure Functions and Bot Framework
- Integrated LLMs with Function Calling & Redis on the backend to enable automated outreach
- Enhanced the frontend using React, Redux Toolkit, RESTful APIs, and Tailwind CSS for responsive, modern UI design

INSTRUCTIONAL SUPPORT ASSISTANT @ UNIVERSITY OF WATERLOO | C, BASH, PYTHON, REACT, FLASK, NODE.JS, DOCKER

Jan 2025 - Apr 2025 | Waterloo, ON

- Assisted CS136 (Elementary Algorithm Design and Data Abstraction) students, gave weekly course presentations
- Led development of Codehoot, a C programming competition game, utilizing a Docker container with Flask backend to safely compile + distribute code, a websocket server, and a React frontend. Used in CS136's final review session.
- Created Python and Bash scripts to automate style + attendance grading, leading to consistent grading

PROJECTS

VIRTUAL-CUBE.NET | HTML, CSS, BOOTSTRAP, P5.JS, NODE.JS, SQL

2022 - 2025

- Created website featuring a virtual Rubik's cube where users can practice cubing, amassing 10000+ users
- Implemented an efficient auto-solver, fun challenge modes, and customizable cubes with different colors and dimensions
- Added JS webcam integration for a physical Rubik's cube scan + solve feature to teach solving techniques
- Added login system to save user data and user activity tracker using a Node backend
- Built Raspberry Pi Node websocket server via Cloudflare Tunneling to enable secure, low-latency multiplayer modes

SYMPTOCARE | FLASK, GPT, HTML, CSS

Feb 2024

- Won the Best Overall Hack award at Boston University's 24-hour Tech for Change hackathon
- Implemented GPT integration on a disease search and diagnosis platform based on symptom data

QUALIFICATIONS

Languages: JavaScript, TypeScript, Python, C, C++, C#, Java, SQL, HTML/CSS, Bash, LaTeX

Frameworks/Tools: React, Express, Flask, FastAPI, Docker, GraphQL, MongoDB, GitLab CI/CD, P5.js, Git, PyTorch, Figma

AWARDS

2025 CS International Student Upper-Year Scholarship (\$15,000)

2024 Winner of Tech For Change: Civic Tech Hackathon
